Influencer Partners: How-To & Overview

Oct 23, 2026 · @Chris

Overview

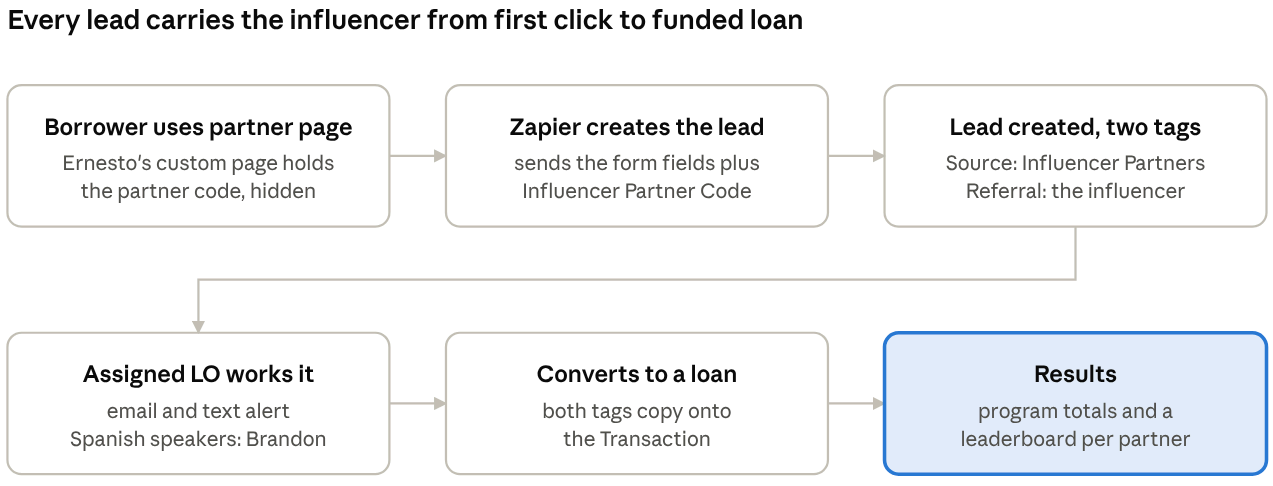

Influencer Partners is your working tab for the influencer channel. You use it to recruit YouTube, Instagram, TikTok and other creators. You track each one from first contact to Active. Then you see exactly which influencers produce leads, closed loans and funded volume.

It tracks **partners, not borrowers**. Partners never appear in the loan pipeline or in loan reporting. The borrowers they send flow into the normal Lead and Transaction pipeline, and your LOs work them as usual.

Every borrower lead from the program carries two tags, set automatically:

Tag	Field	What it answers
Channel	Lead Source = **Influencer Partners**	How much did the whole program produce?
Partner	Referral Source = **the influencer**	Which influencer sent this lead?

Both tags copy onto the loan when the lead converts. That gives you program totals and a per-influencer breakdown from the same data.

how a lead is attributed · 6 steps

Nothing in this chain needs manual tagging when the Zap sends the partner code.

Where to find it

Open your **Marketing Command Center** on the Home page. Click the third button, **Influencer Partners**, next to Consumer Webinar and Social Media. The working tab opens right inside your Command Center.

The same screen is also its own Salesforce tab. Search **Influencer Partners** in the App Launcher (the nine-dot grid) to open it full-screen.

Who	Access
Ernesto Gutierrez	Primary manager. Full edit.
Chris Lowman, Brandon Brotsky, Adam Stephens	Full edit, same screen
Everyone else	No access. The button and tab are hidden.

Access comes from the **Influencer Partners** permission set. To add someone, an admin assigns it to them.

The screen at a glance

The top row is five numbers that sum up the whole program:

Tile	Meaning
Partners in pipeline	Every partner not marked Lost
Active partners	Partners at the Active stage
Needs a touch	Partners with no contact for 14+ days
Leads · all time	Borrower leads from the program, plus the closed-loan count
Funded volume · all time	First-lien loan amount of every Post-Closed program loan

Under the tiles are four views. Switch between them with the navy buttons.

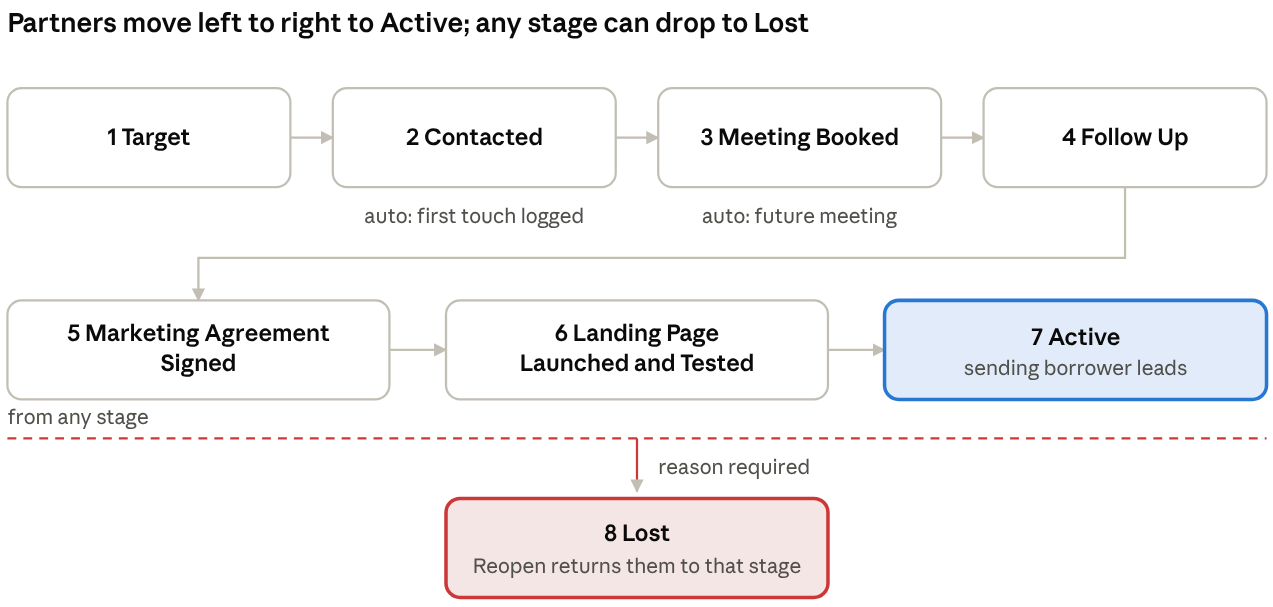

View	Use it to
Pipeline	Work your partners on a board with one column per stage
Leads	Watch every program lead, read-only, filtered by partner or status
Loans	Watch every program loan, read-only, with amounts and Post-Closed dates
Results	Measure production and cost per partner over a date range

Click any partner, on the board or in Results, to open their **partner panel** on the right.

Use **Refresh** to pull the latest numbers. Use **+ Add partner** to add a new one.

The pipeline stages

Every partner sits in one of eight stages. Move a partner by dragging their card to another column. You can also pick a stage from the Stage menu in their panel.

pipeline stages · 7 forward, Lost from any

Two moves happen on their own. Everything else is your call.

Stage	What it means	How it moves
1. Target	An influencer you want to work with	You add them
2. Contacted	You've reached out	**Automatic** when you log the first touch
3. Meeting Booked	A call or meeting is on the calendar	**Automatic** when a future meeting exists on their record
4. Follow Up	Talked, working toward terms	You move it
5. Marketing Agreement Signed	Agreement signed and fee set	You move it (fill in the agreement date and fee too)
6. Landing Page Launched & Tested	Custom page live, one test lead came through Zapier	You move it
7. Active	Live and sending borrower leads	You move it
8. Lost	Dropped off at any point	You move it, and you must pick a reason

Lost can happen from any stage. When you move a partner to Lost, pick a reason: No response, Not interested, Audience not a fit, Terms declined, Went with competitor, or Other. The tool remembers the stage they were in.

To bring them back, open their panel and click **Reopen**. They return to the stage they were lost from.

The Lost column is hidden to keep the board clean. Click **Show Lost** above the board to see it.

How to add a partner

1. Click **+ Add partner** at the top right.
2. Fill in what you know:
   - **First and last name** (required)
   - **Email** and/or **Phone** (at least one is required)

- **Biggest social channel**: YouTube, Instagram, TikTok, Facebook, Podcast, X or Other
- **Audience size**: follower or subscriber count
- **Channel URL / handle**, so you can click straight to their profile
- **Offer website**
- **Assigned LO**: the Loan Officer who will receive this partner's borrower leads

3. Click **Add at Target**. The partner appears in the Target column and their panel opens.

Duplicate alert. When you finish typing an email or phone, the tool checks whether that person is already in Salesforce. Example: a past borrower who became a creator. If they are, you'll see *"This contact already exists, select them instead of creating a duplicate."* Click **Select** to link the existing person, so you never create a duplicate.

A borrower who becomes a partner keeps their Borrower account type. They still show up everywhere in this tool.

Partner code. Each new partner gets a short code from their name, like `MARIA-G`. If the code is taken, a number is added (`MARIA-G2`). Their landing page sends it to Salesforce through Zapier. You can change it until their first lead arrives. After that it locks, so pages already live keep working.

How to work a partner (the partner panel)

Click a partner's card to open their panel. Top to bottom it shows:

- **Stage menu**, plus **Reopen** if they're Lost
- **Log touch**, **+ New lead from partner**, **Edit details**
- **Partner code** with a **Copy** button
- **Production · all time**: leads, pre-approved, closed and conversion, funded volume, fees, cost per closed loan
- **Partner details**: email, phone, channel and link, audience, offer website, assigned LO, agreement date, monthly fee, notes
- **Leads** and **Loans** from this partner, each linking to the Salesforce record
- **Timeline**: touches, notes, meetings and new leads, newest first

Log a touch. Click **Log touch** and pick what happened: Call, Text, Email, Meeting or Note. Add a line about it and click **Save**. A Note goes on the timeline but doesn't count as contact.

Calls and texts from RingCentral, meetings on the calendar and synced emails count automatically. You don't need to log those twice.

Needs a touch. A partner shows an orange *"14d quiet"* badge when 14 or more days pass with no touch. This applies at every stage except Lost. For Active partners, a new lead from them also resets the clock.

Edit details. Click **Edit details** to update anything on the partner, including:

- the assigned LO
- the partner code, until their first lead
- the agreement-signed date and monthly fee
- notes such as niche and where their audience lives

Click **Save**.

How to launch a partner (custom page + Zapier)

Borrowers sign up on your custom landing page for each influencer. A Zap creates the lead in Salesforce. The **partner code** is what ties that lead to the influencer, so every page must send it.

Map these fields in the Zap's Salesforce "Create Lead" step:

Salesforce Lead field	Send	Required?
First Name, Last Name, Phone, Email	The borrower's details from the page	Last name, plus phone or email
Influencer Partner Code	The partner's code, e.g. `MARIA-G`, as a hidden field on that partner's page	**Yes**, this is the attribution
Lead Source	`Influencer Partners`	Recommended. If a code is ever wrong, the lead still lands in the program.
Comments	Anything the borrower typed	Optional
Spanish Speaker Intake Form	`Yes` or `No`	Optional

Don't map Owner, Referral Source or Buyer's Agent. Salesforce sets those from the code.

Steps to launch (stage 6):

1. Make sure the partner has an **Assigned LO**. With no LO, their leads go to the shared Intake Form Queue.
2. In the partner panel, click **Copy** next to the **Partner code**.
3. Build the partner's landing page with the code in its hidden partner-code field, and connect it to the Zap.
4. Submit one test lead through the page. Check it appears in the **Leads** view with the partner's name and their LO as owner.
5. Delete the test lead, or ask an admin to.
6. Move the partner to **Landing Page Launched & Tested**, then to **Active** once they're promoting it.

What happens automatically when a lead arrives with a valid code:

- Lead Source is set to **Influencer Partners** and Referral Source to **the influencer**, whatever the Zap sent.
- **Buyer's Agent** stays blank.
- The lead goes to the partner's **Assigned LO**, or to **Brandon Brotsky** if Spanish Speaker is Yes.
- The LO and Ernesto get a **"New Influencer Partner Lead"** email from reachus@ and a **text** with a link to the lead (the text goes to the LO only). It names the partner and the assigned LO, and the LO's Loan Partner is copied too.
- The lead counts toward that partner's results right away.

If the code is missing or wrong, the lead is created untagged and owned by the Zap's user. If the Zap also sends Lead Source = Influencer Partners, find these leads in the **Leads** view under **No partner**.

The Salesforce intake form link (`?partner=CODE`) still works as a backup, with the same results.

How to add a lead by hand

Use this when a borrower reaches you without the link. Example: they call in and say *"I saw you on Maria's channel."*

1. Open the partner's panel and click **+ New lead from partner**.
2. Enter first and last name, plus a phone or email, and any notes.

3. Click **Create lead**.

The lead gets the same two tags as a form lead. It goes to the partner's Assigned LO, or to normal lead assignment if no LO is set.

Lead Source locks once a lead has one. Retagging an existing lead from another source needs the lead's Owner, its Loan Partner, or an admin. Ask one of them rather than creating a duplicate.

Measuring results

Leads view. Every lead tagged Influencer Partners, newest first. It shows the partner, status, owner, created date, pre-approval date and whether it converted. Filter by partner (or *No partner*) and by status. Click a name to open the lead. This view is read-only: the LOs own and work the leads.

Loans view. Every program loan, with status, Loan Officer, loan amount and Post-Closed date. The header shows funded volume for what's on screen. Filter by partner and status.

Results view. Pick a range at the top: **This month**, **This quarter**, **YTD** (the default) or **All time**. You get program totals, then a **partner leaderboard** ranked by funded volume. Click a partner row to open their panel.

How each number is counted:

Number	Counted as
Leads	Influencer Partners leads **created** in the range
Pre-Approved	Those leads that have a Pre-Approval date
Loans	Program transactions **created** in the range
Cancelled	Those loans now Cancelled or Lost (shown separately, never in volume)
Closed	Loans that reached **Post-Closed**, dated by the Post-Closed date
Funded volume	Sum of the 1st-lien loan amount on those closed loans
Conversion	Closed ÷ Leads, as a %

Number	Counted as
Fees	Monthly fee × each calendar month the agreement ran inside the range, partial months counted, stopping at Lost
Cost / closed loan	Fees ÷ Closed

The program totals include leads tagged Influencer Partners that have no partner. The leaderboard shows only attributed ones. If totals and leaderboard don't add up, some leads are missing their partner. Filter the Leads view by **No partner** to find them.

Agreements and fees

Pay influencers a **flat marketing fee only**, never per lead, per application or per closed loan. Mortgage referral payments are restricted by RESPA Section 8. A flat fee for marketing services is the structure that keeps the program compliant. Have compliance approve the agreement template before the first one is signed.

When an agreement is signed:

1. Open the partner's panel and click **Edit details**.
2. Enter the **Agreement signed** date and the flat **Monthly fee**.
3. Attach the signed agreement to the partner's Salesforce record under **Files**. Open the record from any of their leads, or search their name.
4. Move them to **Marketing Agreement Signed**.

The tool counts fees from the agreement date until today, or until the partner is marked Lost. That gives you cost per closed loan for each influencer.

Weekly routine

A 20-minute rhythm that keeps the pipeline honest:

- [ ] **Clear the Needs a touch count.** Open each partner with an orange badge and log a call, text or email.
- [ ] **Add new targets.** Use **+ Add partner** for any creators you found this week.
- [ ] **Move cards forward.** Drag partners whose status changed. Mark drop-offs Lost with a reason.

- [ ] **Launch new Actives.** For anyone at Agreement Signed, put the code on their page and run a test lead.
- [ ] **Check Leads.** Filter by *No partner* and fix any program lead missing its influencer.
- [ ] **Review Results.** Look at the leaderboard on YTD. Who is producing closed loans, and who costs fees with no leads?

FAQ and troubleshooting

Question	Answer
I dragged a card back to Target but it jumped to Contacted.	Auto-moves run when the board loads. A partner with a logged touch moves past Target, and one with a future meeting moves to Meeting Booked. Use Lost if they dropped off.
I can't change a partner's code.	It locks after their first lead, so live pages keep working. If it truly must change, ask an admin and update the hidden code on their page too.
A lead came in but isn't on the partner.	The Zap probably sent a missing or mistyped partner code. Ask the LO or an admin to set Referral Source to the influencer. It then counts on their row.
The influencer's audience is Spanish-speaking.	Leads the Zap sends with Spanish Speaker = Yes go to Brandon Brotsky, as on the realtor form. Others go to the Assigned LO.
No LO got the lead.	The partner has no Assigned LO, so the lead went to the Intake Form Queue. Ernesto still gets the alert email. Set an LO in Edit details.
Can LOs see this tab?	No. Only Ernesto, Chris, Brandon and Adam. LOs work the leads in their normal pipeline.
Can I edit a lead from here?	No. Leads and Loans are read-only here. Click the name to open the record, or ask the LO.

Question	Answer
The screen looks out of date after a change.	Click **Refresh**. If a layout looks wrong after an update, reload the browser tab.
Is there a phone version?	Not yet. It's desktop only for now.

Questions or changes: ask Chris Lowman.
